Marvel

nonionic silicone surfactant

Accelerate the Efficacy

- Marvel is formulated with a blend of field-proven nonionic (NIS) and organosilicone (OSS) surfactants that penetrate wetting-resistant pests more efficiently than an NIS alone
- Rapidly infiltrates the stomata cuticle with the active ingredient for complete permeation
- Makes the application almost immediately rainfast
- Very low surface tension significantly improves coverage at low use rates
- Compatible with most active ingredients and nutrients. Recommended for crop and non-crop markets when the active ingredient label calls a nonionic surfactant (NIS)

Tech Matrix

Surfactant Type	OSS Blend
Surface Tension	25 dyn/cm
Contact Angle	31°
Humectants	√

Directions for Use

Follow the recommendations of the most restrictive active ingredient label.

Tank mixtures should only be applied within the label recommendations of every product in the tank mixture.

Use Rates

Application	Marvel per gallon of spray solution
PCO	1 tablespoon
	MARVEL per 100 gallons of spray solution
Ground	12 to 64 ounces
Aerial	12 to 32 ounces
Aquatic	8 to 32 ounces
General Wetter/Spreader	6 to 12 ounces

Marvel provides excellent coverage at low use rates; the applicator is advised to observe the spray performance to determine the best rate under his current field conditions. Do not spray to runoff.
